Exergy Analysis Of Combined Cycle

The exergy analysis identifies the sources of irreversibility in the system and aids in the evaluation of losses and outputs by examining their quality. Exergy analysis of the combined Brayton/Rankine power cycle of NTPC (National Thermal Power Corporation) Dadri India is done. Theoretical exergy analysis is carried out for different combined cycle

Exergy and Efficiency Analysis of Combined Cycle Power Plant

The improvement aspects of various power plants based on combined cycle has been discussed. This book contains the information regarding the working, improving the efficiency of a combined cycle power plant through exergy analysis. In the combined cycle power plants, natural gas is used as major fuel.

The Exergy Analysis On A Natural Gas Based Combined Cycle ...

However, there is increasing interest in the advanced thermodynamics topic which combined the first and second laws of thermodynamics to carry out the cycle analysis by energy and exergy. Exergy analysis (destruction and efficiency) introduced to evaluate the thermal efficiency of the cycle based on energy consumption.

Exergy analysis of the combined Brayton/Rankine power cycle of NTPC (National Thermal Power Corporation) Dadri India is done. Theoretical exergy analysis is carried out for different combined cycle power plant which consists of a gas turbine unit, heat recovery steam generator without extra fuel consumption and steam turbine unit.

Exergy and Efficiency Analysis of Combined Cycle Power Plant

Combined cycle power plants (CCPPs) have an important role in power generation. The objective of this paper is to evaluate irreversibility of each part of Neka CCPP using the exergy analysis. The results show that the combustion chamber, gas turbine, duct burner and heat recovery steam generator (HRSG) are the main sources of irreversibility representing more than 83% of the overall exergy losses.

Exergy analysis of a 420 MW combined cycle power plant ...

In this study, a 90 MW e combined Rankine cycle utilizing LNG cold exergy was proposed. Utilizing LNG cold exergy and waste heat from the conventional steam cycle, this process was able to generate additional power in the CO₂ organic Rankine cycle (ORC).

Mehmood presented Energy and exergy analysis of biomass co-firing based pulverized coal power generation. Cihan et al. , Energy and exergy analysis and modernization suggestions for a combined- cycle power plant. Regulagadda et al. presented Exergy analysis of a thermal power plant with measured boiler and turbine losses. The result showed the exergy loss distribution indicates that boiler and turbine irreversibilities yield the highest exergy losses in the power plant.

Exergy analysis of Garri "2" 180 MW combined cycle power ...

The results show that the greatest exergy loss in the gas turbine occurs in the combustion chamber due to its high irreversibility. As the second major exergy loss is in HRSG, the optimization of HRSG has an important role in reducing the exergy loss of total combined cycle. In this case, LP-SH has the worst heat transfer process.
