I have an iPhone 6s that has the searching/no service issue. I've seen this a lot online with the iPhone 6/6 Plus, but no one really talks about it with the 6s. Is it caused by the same baseband ic issue or is it another chip? I've looked around to get this repaired, but no one really seems to offer this service.

SOLVED: iPhone 6s Searching/No Service - iPhone 6s - iFixit

Another very effective solution to the no service or signal issue on Android and Samsung devices, is to manually try connecting to the service provider. All you need to do is toggle airplane mode on and then back off so that the device attempts to connect. Oftentimes that's all that's needed to reestablish connection with the service provider.
