Two-wire stations include the N-8000MS Multifunctional Master Station, equipped with a 32 character alphanumeric LCD display, handset and speed dial functions; the N-8010MS Standard Master Station with keypad and handset; the N-8020MS Industrial Master Station, built to withstand severe environmental conditions; and the N-8011MS Hands-Free Master Station offering hands-free simultaneous two-way (duplex) communication via an innovative ambient noise sensing function.

TOA Electronics, Inc. - Two-Wire Stations

Relative thickness of wire gauges, drawn to scale (not actual size). Thick wire (12 or 14 gauge) is recommended for long wire runs, high power applications, and low-impedance speakers (4 or 6 ohms). For relatively short runs (less than 50 feet) to 8 ohm speakers, 16 gauge wire will usually do just fine.

Speaker Wire: How to Choose the Right Gauge and Type

wire. High currents allow too much power, or electrical energy, to be wasted in wires in the form of heat. The power (P) lost in the wire is related to the square of the current (I), so reducing the current in the wires a little reduces the power lost in them considerably. In fact, reducing the current flowing in a wire by a factor of 2 will reduce

SYSTEM DESIGN

WIRELESS GUIDE SYSTEM. Ideal, easy-to-use system for on-site tours in noisy environments, simultaneous interpretation and extended listening coverage in difficult situations. WM-2100. Portable Transmitter. •5-channel. YP-M101. Tie-clip Microphone. YP-M201. Close-Talking Microphone.
